-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

1. ☒ The amendment filed on 03 May 2007 under 37 CFR 1.312 has been considered, and has been:

a) ☐ entered.

b) ☐ entered as directed to matters of form not affecting the scope of the invention.

c) ☐ disapproved because the amendment was filed after the payment of the issue fee.

Any amendment filed after the date the issue fee is paid must be accompanied by a petition under 37 CFR 1.313(c)(1) and the required fee to withdraw the application from issue.

d) ☒ disapproved. See explanation below.

e) ☐ entered in part. See explanation below.

Applicant has not amended the most recent form of the claims due to an error in the examiner's amendment mailed on 4/17/07. In order to make the record clear, this 312 amendment has not been entered and the attached examiner's amendment will be entered instead.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Attorney Doug Hansom on 6/19/07. The purpose of the examiner's amendment was to correct informalities.

The application has been amended as follows:

IN THE CLAIMS:

Cancelled claim 31

Added Claim 64:

64. A cylinder adapted to contact a web comprising:

first and second spaced cylinder ends and a cylinder body between said first and second cylinder ends, said cylinder body being adapted to engage a web having at least one image element printed on the web at a first image location;

a cylinder axis of rotation defined by said first and second spaced cylinder ends and said cylinder body, said cylinder axis of rotation extending transversely to a web-travel direction of the web engagable with said cylinder body;

means supporting said cylinder for rotation in said web-travel direction about said cylinder axis of rotation; and

means shifting said first and second spaced cylinder ends and said cylinder body with respect to each other to impose a cylinder bend on said cylinder in one of a direction in, and opposite to said web-travel direction to displace a location of said at least one image element printed on the web engagable with said cylinder body from said first image location to a second image location, different from said first image location, as a function of said imposition of said cylinder bend on said cylinder.
